

AMENDMENTS TO THE SPECIFICATION:

Please replace the title with the following:

**METHODS FOR CALL TRANSFER  
BETWEEN FIRST AND SECOND COMMUNICATION UNITS OF A  
PARTY WHILE ENGAGED IN AN ACTIVE CALL**

Please replace the abstract with the following amended abstract:

~~Methods are disclosed for conveniently transferring calls~~ Call transfer between first and second communication units (e.g., a home or office phone and mobile phone, or vice versa) of a party, without requiring a designated "transfer" key and without requiring entry of a directory number of the second phone. A party engaged in an active call requests transfer of the call from a first communication unit to a pre-provisioned second communication unit. Responsive to the request, a switching system (e.g., mobile switching center) consults a database to determine the second communication unit and attempts to establish a telephonic connection to the second communication unit. If the connection to the second communication unit is established, the connection to the first communication unit is dropped, thereby transferring the call from the first communication unit to the second communication unit of the party.
